
A compilation of quality control data from Geoscience BC RGS Initiatives

Data Presentation and Metadata

Geoscience BC Report 2018-15

Compiled by

Wayne Jackaman
Noble Exploration Services Ltd.
Jordan River, BC

November 2017

Project Summary

Since 2005, a total of 13031 regional geochemical survey (RGS) stream sediment, lake sediment and till samples have been collected by Geoscience BC managed programs. These, and an additional 43107 previously archived multi-media samples, have been analyzed for up to 60 elements by a number of techniques including instrumental neutron activation (INAA), aqua regia inductively coupled argon plasma mass spectroscopy (AR-ICPMS) and lithium borate fusion-inductively coupled argon plasma emission/mass spectroscopy (LB-ICPES/MS).

The accuracy and precision of these data are scrutinized by assessing the results of multi-element analysis from sample-site duplicate, analytical duplicate, reference standard samples imbedded with the routine RGS samples using a quality control protocol established by the Geological Survey of Canada and the British Columbia Geological Survey (McCurdy et al., 2014; Ballantyne, 1991; Friske and Hornbrook, 1991).

This document describes the quality control database that has been generated from the multi-element geochemical analysis of samples collected by regional surveys and sample reanalysis initiatives supported by Geoscience BC. Table 1 list the field surveys and table 2 list the reanalysis projects included in this compilation. A bibliography of the reports used in this compilation is provided in Appendix A.

Table 1. List of Geoscience BC sponsored field surveys conducted since 2005, showing survey type, sample material collected, name of commercial laboratory plus analytical methods used. Abbreviations: ICPMS, inductively coupled argon plasma mass spectroscopy; INAA, instrumental neutron activation.

SURVEY REPORT	SURVEY NAME	SURVEY YEAR	SURVEY TYPE	SAMPLE TYPE	LAB & METHOD
GBC REPORT 2008-03	QUEST	2007	SAMPLE REANALYSIS	ARCHIVED STREAM SEDIMENT	ACME - ICPMS

Quality Control Samples

Quality control samples were routinely used for both regional surveys and sample reanalysis projects (Table 3). Both types of geochemical data collection techniques utilized imbedded quality control samples that were sequentially placed within the sample sequence. Previous surveys include original sample-site, analytical duplicate samples and in some cases standard reference material that have been maintained and available for subsequent reanalysis work. Generally, a selection of fresh standard reference materials were used for new regional surveys and a combination of new and original standard reference materials were used for sample reanalysis initiatives (Table 4).

Table 3: Standard quality control protocols used for both new surveys and reanalysis projects. Each batch of consequentially numbered samples includes a sample site duplicate pair, an analytical duplicate sample, a standard reference sample and 17 routine samples. Abbreviations: GSC, Geological Survey of Canada; BCGS, BC Geological Survey; CCRMP, Canadian Certified Reference Materials Project.

Quality Control Sample	Definition	Batch Location
Sample-site duplicate	A second sample collected from the same field site location as a routine sample	Random position in batch of 20 samples, usually a sequentially numbered pair
Analytical duplicate	Split of a lab processed sample into two separate sample pulps	A single split of a randomly selected routine sample placed in sequential order at start of each batch
Standard reference material	CCRMP and/or in-house material developed by GSC or BCGS	One sequentially numbered sample randomly inserted in batch of 20 samples
Routine samples	17 uniquely identified, individual samples collected from distinct field site locations	Make-up remaining positions in each batch of 20 samples

Table 4. Inserted standard reference materials used for regional surveys and reanalysis projects. Abbreviations: GSC, Geological Survey of Canada; BCGS, BC Geological Survey; CCRMP, Canadian Certified Reference Materials Project.

Standard Origin	Codes	Type	Size Fraction
GSC in-house standard reference material	GSC A, HK, Q, S1, S2, W, X, X2, Y, Y2, V, 9R	stream sediment	<0.177 mm or <0.074 mm
BCGS in-house standard reference material	RGS N1, NVI, RD, SQ	stream sediment	<0.177 mm
BCGS in-house standard reference material	RGS CL	lake sediment	<0.177 mm
BCGS in-house standard reference material	RGS TILL	till	<0.063 mm
CCRMP - CANMET certified material	STSD 1, 2, 4	stream sediment	<0.074 mm
CCRMP - CANMET certified material	LKSD 3, 4	lake sediment	<0.074 mm
CCRMP - CANMET certified material	TILL 1, 3, 4	till	<0.074 mm

Data Presentation and Metadata

Results of this compilation have been stored in twenty-seven Microsoft® Excel (XLSX) files. Each of the project files contain the raw quality control data that was used as part of the analytical work. Data for the quality control sample type and associated laboratory technique are stored as individual TABS (Table 5). Files also include a NOTES tab that summarizes the information being presented and provides the reference for each report and the Geoscience BC web link. Access to original report publications will provide specific details on survey methods and specifications plus published survey results.

Table 5. List of XLSX spreadsheet tabs and description of tab labels. Abbreviations: ICPMS, inductively coupled argon plasma mass spectroscopy; INAA, instrumental neutron activation.

Tab	Tab Label	Description
1	NOTES	brief project summary
2	SURVEY FLD DUPS ICP	ICPMS sample site duplicate data
3	SURVEY BLD DUPS ICP	ICPMS analytical duplicate data
4	SURVEY STANDARDS ICP	ICPMS standard reference material data
5	SURVEY FLD DUPS INA	INAA sample site duplicate data
6	SURVEY BLD DUPS INA	INAA analytical duplicate data
7	SURVEY STANDARDS INA	INAA standard reference material data

Table 6 describes common spreadsheet headers used for each tab. Table 7 provides definitions of abbreviations and codes used in spreadsheet headers and cells. Complete listings of data associated with each analytical method are included in Tables 8, 9 and 10. Note that analytical information provided for each project may not include all the data listed in the tables.

Table 6. Common data field header codes used in each spreadsheet.

Code	Definition
ORDER	Sequential order of data records in the compilation.
REPORT	Report designation for the analytical results presented.
NAME	Project name of survey area.
SURVEYTYPE	Regional survey or sample reanalysis.
SURVEYID	Unique ID number listed for each data record.
LAB	Analytical laboratory conducting listed sediment analysis.
MTHD	Primary analytical method used.
YEARANLYS	Year samples were analyzed.
SAMPLETYPE	Stream, lake sediment; till; spruce needle, spruce twig.
SIZEFRCTN	Sediment fraction used for analysis.
FLD_DUP	FD1: first of field duplicate pair; FD2: second.
BLD_DUP	BD1: first of blind duplicate pair; BD2: second.
STANDARD	Name of control reference standard.

Table 7. Explanation of abbreviations used in spreadsheet headers and cells.

Abbreviation	Definition	Abbreviation	Definition
ICPMS	inductively coupled plasma–mass spectrometry	ICPES	inductively coupled plasma–emission spectrometry
INAA	instrumental neutron activation analysis	FA	fire assay
TOTAL/C	total carbon	TOTAL/S	total sulphur
ION	specific ion electrode	GRAV	gravimetric (weight difference)
PPM	parts per million	PPB	parts per billion
PCT	percent	WT	weight in grams
-	< method detection level	-9999	missing or data not reported

Table 8. Data listing for aqua regia inductively coupled argon plasma mass spectroscopy plus fluorine and loss on ignition.
 Abbreviations: ICPMS, inductively coupled argon plasma mass spectroscopy; INAA, instrumental neutron activation; FA, lead collection-fire assay; ION, specific ion electrode; GRV, gravimetric; PPB, parts per billion; PPM, parts per million; PCT, percent.

Element	Unit	Method	Element	Unit	Method
