## Interpreted Drill Cuttings Description

Sample Quality: V POOR,  
SAMPLES WET WITH INVERT, V  
BRIEF LOOK/DESCRIPTION, v  
finely ground.

Well Name: STONE MTN RES / RAMSHORN TATTOO  
Status/RR: N/A  
TD Depth/Fmn: N/A  
Examined: JUL-2009  
JC Consulting Inc.  
J Clow, P Geol  
403 651-7890  
File No: 2009-033

Sampling did not start until well into the Debolt, therefore the upper possibly porous interval was not present in samples. The samples observed consisted wholly of limestone and no dolomite was observed. Due to the condition of the samples descriptions are brief but were described generally as a crinoidal mudstone with tr crinoids and pellets. Common siliceous bituminous and argillaceous.

Possible fracture evidence present in 550m sample - white blkly calcite, no evidence for permeability.

No tests reported.

Does not appear to be any potential for water production or disposal.
