

## *Geoscience BC – Search Phase III*

This is the third Search project and covers north central and northeastern BC. It aims to show potential for undiscovered mineral deposits to encourage informed decisions, responsible development and investment in BC.

- Drives informed decisions, responsible development and investment in BC.
- Helicopters used to show potential for mineral deposits – better maps of area's geology.
- Covers up to 9,600km<sup>2</sup> of north central and northeastern BC.
- Open data: results available for communities, First Nations, resource sector, government and others to use.
- Project announcement – **Mining Week May 18th, 2017.**
- Work takes place summer 2017. Results early 2018.

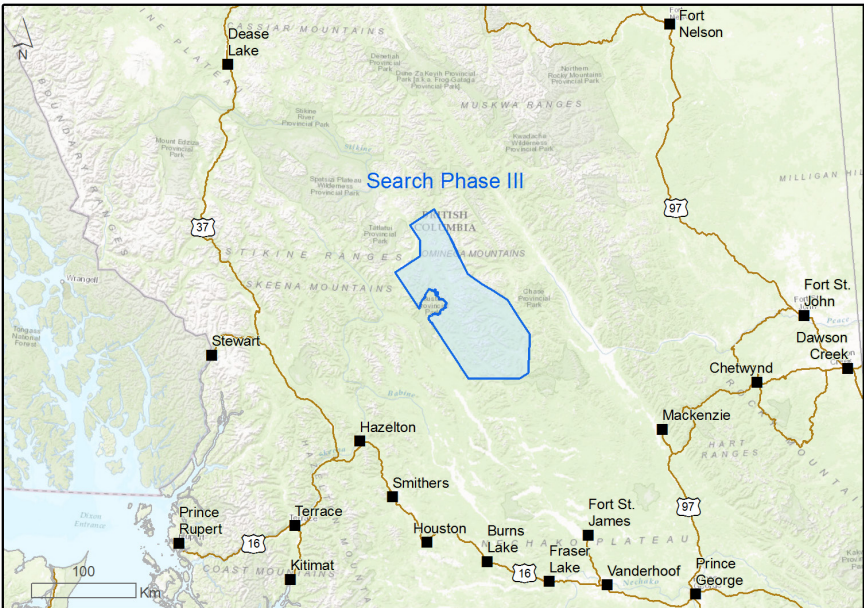

# Geoscience BC – Search Phase III

Search Phase III is an airborne survey which will build understanding of geology in north central and northeastern BC and highlight potential for mineral deposits.

Feedback from previous surveys shows that these projects encourage exploration and, over the long-term, provide the information needed to bring responsible development and investment to BC.

As with all Geoscience BC projects, data will be made openly available to communities, First Nations, the resource sector and government as an unbiased and independent planning tool.
