

# Terrace and Beyond – Filling the Geoscience Gaps Highlighting the Regional Geology and Geochemistry

## TERRACE - WORKSHOP

Recent geological and geochemical work in the Terrace and Prince Rupert map sheet areas has generated a wealth of geoscience information. In fact, the geochemical database is now considered one of the most comprehensive collections in the province. The compilations provide the mineral exploration community with a broad range of data that can be used to target their search for hidden mineralization. Presentations will highlight program results and offer specific details on survey methods as well as the usefulness of the information.

Geoscience BC Introduction

**Christa Sluggett,**
