

Amoco Chevron A-1 Crow

D-36-H 94-N-15

Logged by: PETREL ROBERTSON CONSULTING LTD.

Remarks: Core #1: 4850-4873' (Rec. 16') (boxes say 1850-1873')

4" core, slabbed

Little definitive in terms of environment

FORMATION	FEET	CORE	GRAIN SIZE	PHYSICAL STRUCTURES	REMARKS
			pebble granule sand silt clay v c m f v		
MATTSON	4855 4860 4865 4870	1			<p>Siltstone, somewhat argillaceous, variably calcareous but generally little calcite. Generally massive and featureless - couple of thin flat mud clasts in upper 3' suggest low angle bedding.</p> <p>No effective porosity/permeability - core analysis in 2nd spl clearly a fracture.</p> <p>Surfaces at various orientations suggest mineralized fracture fills.</p>
